

Product Statement

Vehicle Infotainment eXperience - Dashboard Software for Anyone

For drivers with dynamic lifestyle, who need to stay active, connected and in control while on the road, **VIX** is an infotainment system that:

- brings communications, trip management and entertainment under consistent fluid interface experience, safe and legal to operate
- keeps track of your most important contacts, and suggests when and how to best reach out to them
- assists you in choosing most convenient places to refresh, rest and refill while on the road
- plays music, audio books, radio, and major music streaming providers
- blends technology with luxury feel for any car and for everyone

Unlike most competitors, our product is not built for any specific mobile platform, and delivers uniform experience as you move between different cars and mobile devices.

About Us

We are ambitious and passionate technical people, who have a goal to blend technology with simplicity, for the purpose to help people to focus and stay safe while driving on the road. We develop a software product that will be intuitive and easy to use, and will not require any training or getting used to time to learn. We are always questioning. We do things with the goal to be perfect. We are small and agile, as we adjust through our hard work.

We challenge all features and all products that our competitors have developed to find out if there is a better and more efficient way to just do that single function. We also have great ideas that our competitors have not seen or thought possible ... and we are going to introduce these ideas in our product to give it a cutting edge advantage against other products in the market today.

Our Approach

Universal eXperience Ventures LLC is targeting to develop the best infotainment system in your car. It will be a piece of technology built simple, yet powerful, and the one you will use all the time safely as you drive or commute in any car. We believe that we can do this better than our competitors, and that we have a greater vision of how our solution can mature over the years. The idea for our solution and the company behind it was born out of pain from using traditional applications and infotainment systems currently on the market today, and a strong need for great infotainment experience that is safe, user-friendly and accessible to everyone.

~Everything is possible. The impossible just takes a little longer. ~A
